

Charging laptop trolley

Safely charge your laptop in the office or at school with these practical mobile lockers. Fitted with four castor wheels, two of which are braked, you can easily move the trolleys to where they are needed, even between rows of desks thanks to the 525 mm width. This makes them particularly well suited to schools and colleges where you may frequently need to move laptops from room to room.

The units have eight compartments hidden behind central doors that are fitted with a cam lock and come with two keys. Every compartment has a standard, single UK 3-pin socket and ventilation to prevent heat build-up. To power the whole unit, simply plug the lead supplied into the mains. The cabinets have a light-grey frame and a choice of door colours: all are powder-coated with Germ Guard Active Technology anti-bacterial paint.

Available in different sizes & Colours
